## Instruction for sampling

- 1 Fix the rope in or above the pen at the pigs' shoulder height. Ensure it is well secured. Remove the blue tape at the beginning and end of the rope. Allow the pigs to chew on the rope for 20 to 30 minutes to obtain a sufficient amount of oral fluid.
- 2 Put on gloves and take down the rope, place it in the bag. Press the oral fluid out of the rope into the connected tube by squeezing it tightly or stripping it. Collect at least 3 ml. of oral fluid into the tube.
- 3 Remove the tube from the bag and close the tube well. Place the sample identification sticker on the tube and write the identification of the sample on the sticker.
- 4 Pack the tube in the bag and seal it. Add the submission form after completing the information. Send the sample to the lab as soon as possible. It is not necessary to freeze the samples, but you must not store the sample longer than one day.
