

Happy Bite

Instruction for sampling

- 1 Fix the rope in or above the pen at the pigs' shoulder height. Ensure it is well secured.
- 2 Allow the pigs to chew on the rope for 20 to 30 minutes to obtain sufficient oral fluid. Take down the rope and place it in a single sealable bag. Wear gloves to prevent cross-contamination of the ropes.
- 3 Remove the securing cord from the rope and seal the bag. Press the oral fluid out of the rope by squeezing it tightly or stripping it. Collect **at least 10 ml.** of oral fluid.
- 4 Get **new gloves** and tear the perforated corner of the bag. Transfer the oral fluid to a sterile tube and seal it. Take note: do not pool collected oral fluid samples.
- 5 Pack the tube in the small bag and seal it. Place all the small bags in the large pocket of the double bag. Add the submission form to the designated pocket. Send the sample **to the lab as soon as possible**. It is not necessary to freeze samples, but you must not store the oral fluid longer than one day.
